

Participant Certificate

»Logistics IT Database«

The Fraunhofer Institute for Material Flow and Logistics confirms that
SIMA S.r.l.

is a participant in the »Logistics IT Database« for the evaluation period
2024/2025 with the Transport Management System

SGA Release 966

The »Logistics IT Database« is a service provided by the Fraunhofer IML and involves the evaluation of more than 2.800 individual aspects of Transport Management Systems. This includes information concerning the functionality of the software with all the usual functions and processes in transportation planning and processing as well as additional services provided by the software vendor. Approximately 1.600 individual aspects of the system have been verified by Fraunhofer IML employees in collaboration with the TMS vendor.

The verified data are available for potential customers and other stakeholders of Transport Management Systems in the »Logistics IT Online Selection« on warehouse-logistics.com. The database therefore offers a simple, efficient and vendor-independent method for the pre-selection of Transport Management Systems. The validation seal is only awarded after the complete validation and affirms the evaluated functional scope of the TMS.

The certification DIN EN ISO 9001 of TÜV NORD CERT GmbH emphasises the high quality and proper implementation of the validation services in the area of warehouse logistics.
